

X70X Stainless Steel Conveyor

Application:	Smaller food containers, packets and pouches
Recommended use:	Dairy, food, personal care and pharmaceutical production
Benefits:	<ul style="list-style-type: none"> › Reduced production losses caused by unstable products › Improved product and operator safety › Smoother product handling with lessened product damage › High level of cleanliness following HACCP guidelines
Specification:	70 mm
Construction:	Stainless steel
Design features:	New innovative chain design with fewer pinch points

Focus on simplicity, improved product handling and cleanliness

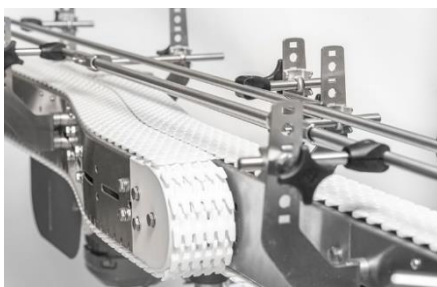

In addition to the 85 mm, 180 mm, and 300 mm stainless steel sizes available, we now offer a new 70 mm option. This new size will replace the present XLX option.

Designed to handle smaller food containers and packets that are more sensitive to being unstable during production. This allows manufacturers greater possibilities to optimise their production control during manufacturing.

The new innovative chain design has a high focus on product and operator safety, decreasing the opportunity for injury during production.

Thanks to a reduction of pinch points, manufacturers are less likely to experience production losses caused by unstable products. The possibility for products such as juice cartons and baby food pouches to be damaged is also lessened, as a result of fewer pinch points.

The simplicity of a lean interior reduces the time needed to clean the line and minimises the risk of cross-contamination.

Without crevices for contaminants such as crumbs to fall into, and with easy operator access for cleaning, the line starts with high levels of cleanliness that are easier to maintain.
